

NEW Uses for Walker Audio Extreme SST!

We now have over 4000 people using our E-SST and SST Super Silver Treatment around the world. It is an unbelievable success everywhere.

Not long after it was introduced, two customers called us and swore their cars ran better and got better gas mileage after applying E-SST to the vehicles' connections. One customer who races car claimed it lowered his quarter-mile time almost two-tenths of a second. What's more, by applying E-SST to his headlight connections, he said the light was 10% brighter as measured by a light meter.

Although skeptical, we tried it ourselves and found that it did improve car performance significantly. Our cars run much smoother, quieter, have more power and fuel mileage is approximately 10% better, even the transmission shifts more smoothly. The results are remarkable.

Putting it to a challenging test, I treated every electrical connection on our 1987 Yamaha Venture Royale motorcycle, including the charging and ignition systems, lights, all the connections with E-SST. My wife Felicia and I then toured 19 states in 25 days covering more than 7000 miles.

This our third cross-country trip in the past four years and I kept mileage records on each. We ride two-up with approximately 150 pounds of gear. In the first two trips, fuel mileage varied between 32 and 36 miles per gallon. This trip it ranged between 40 and 46 miles per gallon and ran noticeable better. Applying the E-SST was the only change to the motorcycle from the previous trips. I can tell you that with today's gas prices, it is quite satisfying to get 40+ miles per gallon.

E-SST and SST will work on any electrical connection. It is a true contact enhancer. You will get better sound, video and equipment performance. The uses for E-SST and SST continue to grow as we hear from more customers who discover new ways to use it. E-SST and SST are so effective when used in audio and video systems that we and others have realized it could be used anywhere electrical connections are essential.

We thank all our customers for their continuing support and enthusiasm for our products.
